

## **Rules to follow**

1. Every similar item (card, text, heading, nav bar, etc) must be the same
2. Please follow a color scheme (#DEC4A1 is the background color; find other colors ). There will be 4 /5 colors in total
3. Avoid white

## **What to do :**

1. Take the .html files in the pages folder. After doing it, the images and the CSS will not be recognized by the .html files
  - a. Don't move index.html
2. Change the font style of the nav bar to something more elegant and give every page the nav bar copy pest
3. Link every page {I mean, when I click on the gallery, it should bring me to the gallery }
4. There is CSS code at the top of many HTML pages and JS code under some pages, giving them another file { copy that code, paste it in another file with extension .css/.js in css/JS folder}
5. Make sure everything looks the same {user can't feel like omg did i go to the wrong website / oh is this the same website I'm on the second ago }
6. After that, polish everything, check for bugs, and enhance
